Thus if the eye be still at an infinite distance, but in the direction at, the projection will have the direction co, but its length will remain equal to ca. Thus the direction of the projecting lines may be parallel to any element of the cone whose axis is ca, the angle at the vertex a being 90, since all these elements make angles of 45 with the picture plane MN. 217. Now any line which lies in the picture plane is its own projection. In representing a cube, therefore, as in Fig. 148, we may assume its nearer face to lie in that plane, and it will thus appear of its true form and size, that is, a square, as shown. From the preceding it follows at once that the edges which are perpendicular to.AW may be represented by parallel lines...
